

USERGUIDE

Installing this script is very simple.

Open file "*fose.php*" in your favourite editor or Notepad.

Look for the lines

```
$user = "yourname";  
$pass = "yourpassword";
```

```
1  <?php  
2  session_start();  
3  ?>  
4  <!DOCTYPE html PUBLIC "-//W3C//DTD XHTML 1.0 Transitional//EN"  
5    "http://www.w3.org/TR/xhtml1/DTD/xhtml1-transitional.dtd">  
6  <html xmlns="http://www.w3.org/1999/xhtml">  
7  <head>  
8    <meta http-equiv="Content-Type" content="text/html; charset=iso-8859-1" />  
9    <title>FOSE FTPLess Online Source Code Editor</title>  
10  </head>  
11  <?php  
12  
13  $domain = "";  
14  $path = "";  
15  $name = "example.html";  
16  $code = "";  
17  
18  
19  //Enter your desired username for the login  
20  $user = "yourname";  
21  //Enter your desired password for the login  
22  $pass = "yourpassword";  
23
```

Replace "yourname" and "yourpassword" with your desired name and password to log in to the secure area.

Upload all files in the 'script' folder to your server.

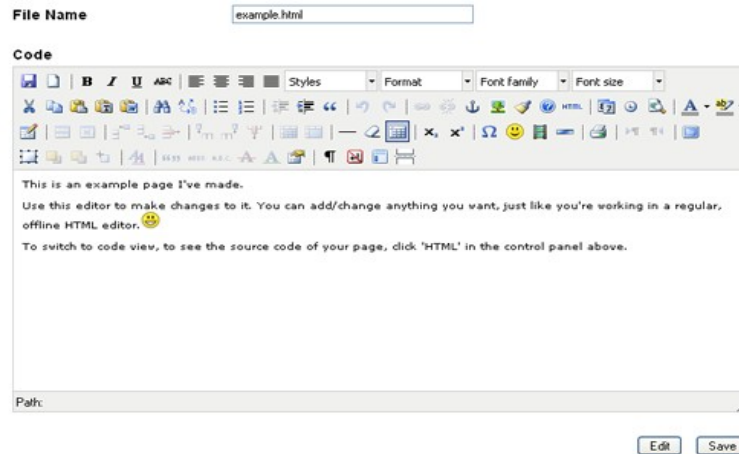

Upload the files **to the same directory as the pages you want to edit**, or your editor will not work.

TIP:

[Watch a video](#) on how to upload files to your server

In your browser, load the URL to the 'fose.php' file and log in with the name and password you have created earlier.

Enter the name of the file you want to edit in the 'File Name' field and click 'Edit' to bring up your source code.

Make the required changes, and click 'Save'.

That's it :-)
